

SELF-INSPECTION FOR UNIMPROVED PARCELS

Please check items below and remove if in violation

1. Cut down and remove dead trees, remove limbs on cut and already downed trees and dispose of both properly.
2. Remove dead branches and trees which are leaning into or against larger trees.
3. Remove and dispose of all dead tree limbs within 15 feet of the ground.
Remove live branches to 6 feet.
A 6-FOOT PERSON MUST BE ABLE TO WALK FREELY UNDER THE TREES.
If tree height is 6 feet or less, remove 1/3 of the bottom branches – live or dead.
You may be required to limb higher depending on slope of land.
Maintain a vertical clearance space of at least 3 times the height of a shrub between any shrub and overhanging tree branch.
4. Remove dead branches (and pieces of branches) on ground.
5. Remove all dead brush, and brush growing under trees and bushes.
6. Remove accumulations of dead materials and/or flammable ground vegetation from underneath and within manzanita and any brush.
7. Thin manzanita bushes. Remove all dead wood from the plant.
Remove all dead manzanita bushes.
8. Accumulations and/or piles of debris must be removed.
9. Remove dead and/or dying smaller trees growing under and/or within the limbs of taller healthy trees.
10. Thin saplings and/or small trees. These saplings will never grow to maturity and they create ladder fuels that endanger the health of mature trees.
11. Cut bear clover (also known as mt misery) and/or ground cover vegetation to a height of 3-4 inches.
12. Cut ALL dead and/or dying grass and weeds.

NOTE: 3 to 4 inches of pine needles (spread out and NOT in piles) are not required to be removed from an unimproved lot.

Thank you in advance for your cooperation. Fire Prevention is everyone's responsibility.
